

Project 5: Grading Rubric

No Credit

- Non submitted assignments
- Assignments late by more than 48 hours
- Non compiling assignments
- Non-independent work
- "Hard coded" solutions
- Code that would win an obfuscated code competition with the rest of CS310 students

How will my assignment be graded?

- Grading will be:
 - Automatic Testing (100%): To assess the correctness of programs.
- You CANNOT get points (even style/manual-inspection points) for code that doesn't compile or for submitting just the files given to you. You CAN get manual inspection points for code that (a) compiles and (b) is an "honest attempt" at the assignment, but does not pass any unit tests.
- Extra credit for early submissions:
 - 1% extra credit rewarded for every 24 hours your submission made before the due time
 - Up to 5% extra credit will be rewarded
 - Your latest submission before the due time will be used for grading and extra credit checking. You CANNOT choose which one counts.

Automated Testing Rubric

For this assignment a portion of the automated testing will be based on JUnit tests and a manual run of your program. The JUnit tests used for grading will NOT be provided for you (you need to test your own programs!), but the tests will be based on what has been specified in the project description and the comments in the code templates. A breakdown of the point allocations is given below:

30 pts	AVLNode
70 pts	AVLTree
